

# KEDMAW: A Kernel for Designing and Managing Web Information Systems

Joël MESSAS, François GRIZE, Javier IGLESIAS  
 HEC - Inforge, University of Lausanne, SWITZERLAND  
<http://inforge.unil.ch/>

KEDMAW incorporates numerous general mechanisms such as the management, the organization of users and their access rights, the hierarchical organization of information, its presentation in several languages and exchange with other systems, and the customization of data presentation. With these mechanisms KEDMAW provides an easy way of creating practical information systems known as extensions. One extension which has been created using KEDMAW is Evadis - a tool for assessing knowledge.
